

Information Technology Project Managers

AI profoundly augmenting project planning, resource management, and risk prediction, shifting focus to strategic leadership.

EXPOSURE 40 Moderate exposure	WINDOW 3–7 yrs until change lands	ADOPTION TODAY Medium-High	READING Augmented more than replaced. Exposure is the share of today's work AI can plausibly take on within the window.
--	--	--	--

§ 01WHAT IS HAPPENING

What is happening to information technology project managers

Impact	AI tools are automating task tracking, scheduling, routine reporting, and providing predictive insights for risk and resource optimization. This shifts IT Project Managers' focus towards high-level strategic planning, complex problem-solving, stakeholder communication, and fostering human-AI collaboration in project execution.
Risk	Significant augmentation; emphasis on strategic leadership, advanced coaching, and AI tool mastery. The Information Technology Project Manager role will be heavily augmented by AI. AI will handle much of the data analysis, performance monitoring, and routine project operations. IT Project Managers will need to become experts in leveraging AI tools, critically evaluating AI outputs for accuracy and bias, focusing on strategic project vision, team development, and the human elements of project leadership. Ethical considerations and bias mitigation in AI performance evaluation will also be paramount.

Sector readiness

Rapid & Deep Integration

The IT and project management sectors are aggressively integrating AI into project management software, resource planning platforms, and risk management tools. Companies are adopting AI to improve project efficiency, forecasting accuracy, and delivery success, characterized by rapid experimentation and implementation of new AI-powered solutions.

§ 02 POSITION

Where you stand

- i The Information Technology Project Manager role is undergoing a profound transformation, with AI becoming a critical partner in every stage of the project lifecycle.
- ii AI will automate iterative tasks and provide powerful analytical insights, allowing managers to focus on high-level strategic planning, complex human leadership, and ensuring the successful delivery of complex IT initiatives.
- iii Success will increasingly depend on mastering AI tools, critically validating their outputs, and developing deep interdisciplinary skills to navigate the complexities of AI-enabled IT project management.

§ 03 ACTIONS

15 POINTS

What this means for you

Concrete changes to how the work gets done, in the order you are likely to meet them.

- 01 **AI-Driven Project Forecasting & Predictive Analytics.** Information Technology Project Managers will increasingly leverage AI tools that analyze historical project data, task dependencies, resource availability, and external factors to generate highly accurate project forecasts for timelines and budgets. This enables more precise resource allocation and strategic planning.
- 02 **AI-Powered Resource Optimization & Allocation.** Information Technology Project Managers will benefit from AI systems that analyze team member skills, availability, workload, and project priorities to suggest optimal resource assignments. This ensures balanced workloads, efficient use of talent, and proactive identification of resource bottlenecks.
- 03 **Automated Task Tracking & Progress Reporting.** AI will autonomously manage the tracking of individual tasks, monitor progress against baselines, and automatically generate routine status reports and dashboards. This significantly reduces manual administrative burden, allowing the Information Technology Project Manager to focus on critical analysis and intervention.

-
- 04 **Intelligent Risk Identification & Mitigation.** Information Technology Project Managers will utilize AI tools that scan project plans, communication logs, and historical data to proactively identify potential risks (e.g., schedule delays, budget overruns, scope creep) and suggest mitigation strategies before they escalate.
-
- 05 **Generative AI for Project Communication.** Information Technology Project Managers will find generative AI invaluable for drafting initial versions of project charters, stakeholder updates, meeting minutes, and even complex incident reports. This streamlines communication, ensuring consistency and allowing focus on strategic messaging.
-
- 06 **AI for Scope Management & Change Control.** AI tools are assisting Information Technology Project Managers in analyzing proposed scope changes, assessing their impact on timelines and budgets, and identifying potential conflicts with existing deliverables. This supports more robust change control processes.
-
- 07 **Focus on Human Leadership & Team Development.** As AI automates many project management mechanics, the core value of Information Technology Project Managers will shift to fostering strong team collaboration, mediating conflicts, coaching project team members, and building high-performing, resilient teams.
-
- 08 **AI-Augmented Stakeholder Analysis & Communication.** Information Technology Project Managers will leverage AI tools to analyze stakeholder sentiment from communication and identify key influencers or potential areas of resistance. This provides insights for more effective stakeholder engagement strategies.
-
- 09 **Ethical AI in Project Decisions.** Information Technology Project Managers will be responsible for ensuring that AI tools used in project decisions (e.g., resource allocation, risk prediction) are applied ethically, are free from unintended biases, and comply with organizational policies. This requires active oversight and validation.
-
- 10 **Human-AI Teaming in Project Execution.** Information Technology Project Managers will increasingly operate in human-AI teams, where AI provides real-time data, insights, and automation for project tasks. The human manager maintains ultimate decision-making authority for critical project decisions, leveraging AI as an intelligent co-pilot.
-
- 11 **AI for Project Portfolio Optimization.** At a higher level, Information Technology Project Managers might contribute to or utilize AI tools that analyze an entire portfolio of projects to optimize resource allocation, maximize ROI, and ensure alignment with overall organizational strategic goals.
-
- 12 **Continuous Learning & AI Tool Mastery.** The rapid evolution of AI tools in project management requires Information Technology Project Managers to continuously update their knowledge and proficiency with new AI-powered planning, tracking, and communication platforms.
-
- 13 **AI-Driven Post-Project Analysis.** AI tools will analyze project performance data, resource utilization, and outcomes from completed projects to identify lessons learned and best practices. Information Technology Project Managers will contribute to and utilize these insights for continuous process improvement.
-
- 14 **Leadership in Adopting New Methodologies.** Information Technology Project Managers will lead the adoption of AI-augmented project methodologies (e.g., AI-infused Agile, Predictive Analytics for Waterfall). This involves defining new workflows and training teams on these integrated approaches.
-

- 15
- Strategic Alignment of Technology with Business.** As AI streamlines project execution, Information Technology Project Managers will dedicate more time to ensuring that IT projects directly align with and contribute to the organization's overarching business strategy, maximizing the value delivered.

What is pushing this change

- 01
- Increasing Complexity of IT Projects.** Modern IT projects involve intricate interdependencies, diverse technologies, and large teams, requiring sophisticated management.
- 02
- Demand for Faster Project Delivery & Agility.** Businesses need to deliver software, infrastructure, and IT services rapidly to gain competitive advantage, driving AI adoption.
- 03
- Availability of Big Data from Project Management Software.** Vast amounts of data are generated by project management software, providing rich input for AI analysis and optimization.
- 04
- Advancements in AI/ML (Predictive Analytics, Generative AI).** Breakthroughs in these AI fields enable sophisticated forecasting, resource optimization, and content generation for PM.
- 05
- Growth of Remote & Distributed Teams.** Managing geographically dispersed teams benefits from AI-powered communication, task tracking, and collaboration tools.
- 06
- Pressure for Higher Project ROI & Success Rates.** Organizations demand clear evidence of project success and financial returns, which AI-driven analytics can provide.
- 07
- Shortage of Skilled Project Managers.** AI augmentation is seen as a way to increase the capacity and efficiency of existing project management workforces.
- 08
- Integration of AI into Project Management Tools.** Major project management software vendors are embedding AI assistant features directly into their platforms.
- 09
- Need for Proactive Risk Management.** AI can identify potential risks (e.g., schedule delays, resource conflicts) much earlier than manual methods.
- 10
- Desire for Objective Project Metrics.** AI provides objective, data-driven insights into project performance, reducing reliance on subjective assessments.

Impact by sector

The headline figure is an average. Where you work changes the picture.

Agile Project Managers	AI for sprint planning, backlog refinement, and predicting iteration velocity. Focus on coaching scrum teams and managing dynamic requirements.
Waterfall Project Managers	AI for long-term scheduling, dependency mapping, and critical path analysis. Focus on managing fixed scope and milestones.
IT Infrastructure Project Managers	AI for resource provisioning automation, deployment monitoring for IT infrastructure, and predictive maintenance for hardware. Focus on ensuring IT system readiness.
Software Development Project Managers	AI for code-related tasks (e.g., test integration, bug prediction), task breakdowns, and managing AI-assisted development workflows. Focus on software quality and delivery.
Client-Facing Project Managers	AI for communication streamlining, status reporting, and sentiment analysis for client interactions. Focus on building strong client relationships and managing expectations.

Skills to build

The skills that keep the human part of this work valuable as the routine part is automated.

- 01 **AI PM Tool Proficiency.** Ability to select, implement, and effectively use AI-powered project management tools, and to interpret the data they generate.
- 02 **Strategic Thinking & Business Acumen.** Ability to align projects with overarching business objectives and understand the broader market context to ensure AI supports strategic goals.
- 03 **Human Leadership & Coaching.** Motivating, guiding, and developing project teams, especially in environments with human-AI collaboration and remote work.
- 04 **Risk Management (AI-augmented).** Ability to identify, assess, and mitigate project risks (including AI-specific risks) using both traditional methods and AI-powered tools.
- 05 **Data Interpretation & Analytics.** Skill in analyzing complex project data (often AI-generated), interpreting AI insights, and making data-driven decisions.

- 06 **Communication & Stakeholder Management.** Clearly articulating complex information (including AI-driven insights) to diverse stakeholders and managing expectations effectively.
- 07 **Adaptability & Change Management.** Willingness to learn new AI technologies and adapt project methodologies to evolving business needs and technological advancements.
- 08 **Ethical Judgment & AI Bias Awareness.** Understanding potential biases in AI tools or data, and ensuring responsible use of AI in project decision-making and resource allocation.

§ 07 INSTRUMENTS

11 ENTRIES

Tools in use

KINDS OF TOOL WORTH KNOWING

- 01 **Integrated Project Management Platforms with AI.** Offering AI for task automation, smart scheduling, progress tracking, and automated reporting within a unified system.
- 02 **Predictive Analytics PM Tools.** Software that connects to project data sources to provide predictive insights, risk analysis, and automated dashboarding for performance monitoring.
- 03 **Generative AI Assistants for PM.** Large Language Models for drafting project communications, summarizing documents, brainstorming ideas, and generating initial project plans or WBS.
- 04 **Resource Optimization AI.** Software that analyzes team member skills, availability, and workload to suggest optimal task assignments, ensuring balanced workloads and efficient use of expertise.
- 05 **Risk Management AI Tools.** AI tools that analyze historical project data, current progress, and external factors to flag potential risks (e.g., budget overruns, schedule delays, scope creep).
- 06 **Collaboration Platforms with AI Features.** Communication and collaboration suites that embed AI for meeting summaries, action item tracking, and improved team interaction.

NAMED TOOLS ALREADY IN USE

Asana (with Asana Intelligence features)

VISIT

A work management platform that uses AI to help automate workflows, summarize tasks, generate reports, and provide project insights.

Microsoft Project (with Copilot integration)

VISIT

A traditional project management tool that is incorporating AI for more intelligent scheduling, resource optimization, and potentially risk analysis.

Jira (with Atlassian Intelligence features)

VISIT

A popular tool for agile project management, especially in software development, with AI features for issue summarization, test case generation, and smart queries.

Smartsheet (with AI features)

VISIT

A work management platform that integrates AI for task automation, content summarization, and intelligent workflow suggestions.

ServiceNow (ITBM with AI)

VISIT

A leading enterprise service management platform that integrates AI into IT Business Management (ITBM) for project portfolio optimization and resource management.

§ 08 EXAMPLES

5 EXAMPLES

In practice

Ways people in this role are already using AI, and what they get from it.

Automate Project Status Reports

EXAMPLE 1

HOW

Utilize AI tools connected to project tracking systems to automatically generate weekly status reports, burndown charts, and budget summaries, freeing up time for analysis.

GAIN

Reduces manual effort in report generation, ensures consistent reporting, and allows more time for strategic project oversight.

Predict Project Delays with AI

EXAMPLE 2

HOW

Implement an AI model that analyzes historical project data, current progress, and external factors (e.g., team availability, dependencies) to predict potential project delays or cost overruns.

GAIN

Enables proactive risk mitigation, reduces project surprises, and improves the likelihood of project success by addressing issues early.

Optimize Resource Allocation for IT Projects

EXAMPLE 3

HOW

Deploy an AI-powered resource management platform that analyzes team member skills, availability, and workload to suggest optimal task assignments for IT projects, ensuring balanced workloads and efficient use of expertise.

GAIN

Improves team productivity, prevents resource overallocation, and ensures tasks are assigned to the best-suited individuals, leading to more efficient project execution.

Draft Project Plans with Generative AI

EXAMPLE 4

HOW

Provide a generative AI tool with high-level project objectives, key milestones, and major deliverables. The AI can then produce initial drafts of project plans, work breakdown structures (WBS), or communication plans.

GAIN

Accelerates the planning phase, provides diverse structural options, and helps ensure comprehensive coverage of project elements in documentation.

Analyze Stakeholder Sentiment EXAMPLE 5	HOW	Leverage an AI tool that analyzes communication channels (e.g., email, collaboration platforms) to gauge stakeholder sentiment towards a project, identifying potential areas of concern or support.
	GAIN	Provides early warnings of potential stakeholder dissatisfaction or identifies key advocates, allowing for proactive engagement and improved project outcomes.

§ 09 CONTEXT

How this role compares

Three neighbouring roles chosen to show the direction of travel.

Project Coordinators (Routine task tracking) / Project Schedulers (Basic scheduling) MORE EXPOSED	AI IMPACT	Very High (AI can autonomously track tasks, manage basic schedules, and generate routine reports.)
	WORK MOVES TO	Role redefinition towards overseeing AI systems, handling complex scheduling exceptions, or specializing in project data analysis.
AI/ML Engineers (for Project Management Software) / Project Data Scientists DIFFERENT SKILLS, GROWING	AI IMPACT	Foundational (They build and deploy the AI algorithms and systems that IT Project Managers will utilize.)
	WORK MOVES TO	Deep expertise in AI/ML algorithms, data science, software engineering, and specific project management domain knowledge.
Executive Sponsors (Strategic Oversight) / Scrum Masters (Human Facilitation) COMPLEMENTARY, LESS EXPOSED	AI IMPACT	Complementary (AI enhances information for Executive Sponsors; AI streamlines some aspects of Agile for Scrum Masters), but core strategic vision, human leadership, and team facilitation remain paramount.
	WORK MOVES TO	Overall strategic alignment, ultimate accountability (Executive Sponsors); Coaching teams, facilitating ceremonies, and removing impediments (Scrum Masters).

§ 10 VERDICT

Closing judgement

For Information Technology Project Managers, AI is not a threat to human ingenuity but a powerful accelerator. It will automate the tedious, amplify analytical capabilities, and unlock new frontiers in project foresight and management. The future IT Project Manager will be a highly skilled human-AI team leader, focusing on critical oversight, strategic problem-solving, and driving successful project delivery in an increasingly complex and AI-driven technological landscape.

Evidence and revisions

What the exposure figure rests on, what changed when it was last revised, and the published work cited for this role.

SCORE

40 (held)

WINDOW

3-7 years (unchanged)

The 4 October 2026 review held the score.

Microsoft's AI applicability score for the matching occupations is 0.17, in the upper half of 785 US occupations; Anthropic's observed exposure (the share of the occupation's tasks already being done with Claude) is 0.16, which is substantial by the standards of the 756 occupations measured; the US Bureau of Labor Statistics places it in the 'very high' AI-exposure tier; BLS projects employment to grow 11.2% over 2025–35. Taken together this is consistent with our previous figure of 40, which we have held.

MEASURES BEHIND THE SCORE

US Bureau of Labor Statistics · *Employment Projections 2025–35 and AI Exposure Categories* (27 August 2026)

AI-exposure tier: Very high. Projected employment change 2025–35: +11.2%. Matched to Computer and information systems managers; Project management specialists.

PUBLISHERPDFARCHIVED COPY

Microsoft Research · *Working with AI: Measuring the Applicability of Generative AI to Occupations* (10 July 2025)

AI applicability score 0.17 (percentile 58 of 785 occupations) for SOC 13-1082, 11-3021.

PUBLISHERPDFARCHIVED COPY

Anthropic · *Anthropic Economic Index report: Cadences* (26 June 2026)

Observed exposure 0.16 for SOC 13-1082, 11-3021 (percentile 81 of 756 occupations).

PUBLISHERPDF

UK Department for Science, Innovation and Technology · *Assessment of AI capabilities and the impact on the UK labour market* (28 January 2026)

UK context: around 70% of UK workers are in occupations with tasks AI could perform or enhance, above the US average; a one-standard-deviation rise in exposure was associated with a 3.9% fall in UK job postings.

PUBLISHERARCHIVED COPY

§ 12 APPENDIX

Method and sources

Each report was written from a large body of published research and then, in October 2026, re-scored against occupation-level evidence: the US Bureau of Labor Statistics AI-exposure classification and 2025–35 projections, Microsoft Research's AI applicability scores and Anthropic's observed-exposure data, cross-checked against the reports listed in the Evidence section above. The organisations and publications below are the standing literature behind the narrative sections. Every source, with dates, licences and archived copies where we are permitted to hold them, is catalogued in the research library.

Scores are revised by blending the previous editorial figure (60%) with a composite of the three occupation-level measures (40%), capped at fifteen points per revision and rounded to the nearest five. The window shifts one notch when a score moves ten points or more. Hand adjustments are recorded with their reason in the revision log.

I GLOBAL AND MACROECONOMIC IMPACT OF AI ON WORK

World Economic Forum

The Future of Jobs Report series — Employer survey of expected job growth and decline, skill shifts and technology adoption (2020, 2023 and 2025 editions); *Artificial Intelligence and the Future of Entry-Level Work* (2026).

AI governance and transformation reports — Frameworks on ethical AI, talent strategy and industry transformation.

McKinsey Global Institute

AI, Automation and the Future of Work series — Research quantifying automation potential by task, sector and demographic, from "Jobs Lost, Jobs Gained" to "Agents, robots, and us" (2025).

Industry-specific reports — Financial services, healthcare, manufacturing and others.

PwC

Global AI Jobs Barometer — Annual analysis of job postings and productivity by AI exposure (2024–2026 editions).

Upskilling Hopes and Fears survey — Employee perceptions and readiness.

Microsoft Research and Anthropic

Working with AI (2025); *Anthropic Economic Index (2025–2026)* — Occupation-level usage data from Copilot and Claude conversations, the two observed-usage measures behind the 2026 revision.

Stanford Digital Economy Lab and Stanford HAI

Canaries in the Coal Mine? (2025–2026); *AI Index Report (annual)* — Payroll evidence on early-career employment in exposed occupations; annual measurement of AI capability, investment and adoption.

Deloitte

Human Capital Trends series — Workforce, talent and HR technology trends.

Tech Trends series — Emerging technologies and their business implications.

Accenture

Technology Vision series — Forward-looking analysis of emerging technology, with emphasis on AI.
Fjord Trends — Design, innovation and human experience in a digital world.

Boston Consulting Group

AI/ML insights and industry solutions — "The AI Revolution in the Workplace" and related research.

EY

AI and workforce reports — Adoption, talent strategy and ethics.

IBM Institute for Business Value

AI and automation studies — Business models, workforce evolution and leadership.

OECD

AI Policy Observatory — International data and policy on AI, labour markets and skills.
Employment Outlook — Labour-market trends including technological impact (2023–2026 editions).

International Labour Organization

Generative AI and Jobs: A Refined Global Index of Occupational Exposure (2025) — Task-level exposure gradients for every ISCO occupation; successor to the 2023 global index.

International Monetary Fund

Staff Discussion Notes on AI and work (2024, 2026) — Complementarity framing: where AI augments and where it substitutes.

UK Department for Science, Innovation and Technology

Assessment of AI capabilities and the impact on the UK labour market (2026) — UK occupational exposure and job-posting evidence.

Brookings Institution

AI and automation research — Economic and social implications, displacement and skills.

Yale Budget Lab and Goldman Sachs Research

Tracking the Impact of AI on the Labor Market; AI and the US labour market (2026) — Aggregate labour-market monitoring; macro displacement estimates.

Oxford University (Oxford Martin School)

The Future of Employment — Frey & Osborne and subsequent research on susceptibility to automation.

MIT Technology Review

AI & Work — Reporting on AI research and its implications for industries and jobs.

Gartner

Hype Cycle for Artificial Intelligence — Maturity and adoption of AI technologies.
Future of Work reports — Workplace models and talent strategy.

U.S. Bureau of Labor Statistics

Employment Projections 2025–35; AI Exposure Categories; Occupational Outlook Handbook — Ten-year employment projections and, from the 2025 cycle, an AI-exposure tier for every detailed occupation.

Indeed Hiring Lab

AI at Work Report (2025) and posting-market updates — Skill-level transformation estimates and job-posting trends by occupation.

II CORE AI AND MACHINE-LEARNING RESEARCH

OpenAI

Research papers, blog and API documentation — Large language models, generative AI, safety and societal impact.

Google DeepMind

Research papers and blog — Reinforcement learning, AI for science, AGI and ethics.

Meta AI

Research papers and blog — Large language models, computer vision, AI for social good.

Hugging Face

Transformers library and model hub — Open-source state-of-the-art NLP models.

TensorFlow and PyTorch

Documentation and community forums — Core frameworks illustrating practical capability.

arXiv

cs.AI, cs.LG, cs.CV, cs.CL — Pre-print research.

NeurIPS and ICML

Conference proceedings — Top-tier academic research.

ACM and IEEE

Journals and proceedings — ACM Computing Surveys; IEEE Transactions on AI.

Kaggle

Datasets and competition solutions — Applied machine learning on real-world problems.

The Alan Turing Institute

Research and reports — Responsible and applied AI.

III ETHICAL AND RESPONSIBLE AI DEPLOYMENT

NIST

AI Risk Management Framework — Voluntary framework for managing AI risk.

European Commission

AI Act — Risk-tiered legal framework for AI.

Ethics Guidelines for Trustworthy AI — Principles for responsible development.

Partnership on AI

Research and best practice — Responsible AI development.

AI Now Institute

Annual reports — Social implications: power, inequality, rights.

ACM FAccT

Proceedings — Fairness, accountability and transparency.

Data & Society

Publications — Social implications of data-centric technology.

WIPO

Conversation on IP and AI — Intellectual-property implications of AI.

IEEE Global Initiative on Ethics of AI/IS

Ethically Aligned Design — Recommendations for ethical AI design.

Center for AI and Digital Policy

Policy briefs — Accountable AI policy.
