AI IMPACT REPORT NO. 297 · REVISED 5 OCTOBER 2026 · 250 ROLES COVERED

Investment Bankers

AI fundamentally restructuring financial modeling, due diligence, and market analysis, shifting focus to deal execution and client relationships.

EXPOSURE	WINDOW	ADOPTION TODAY	READING
66 High exposure	2–5 yrs until change lands	High	Substantial automation of routine work. Exposure is the share of today's work AI can plausibly take on within the window.

§ 01 WHAT IS HAPPENING

What is happening to investment bankers

Impact

AI tools are autonomously analyzing financial data, building complex valuation models, identifying M&A targets, and streamlining administrative tasks. This compels Investment Bankers to radically pivot towards high-level deal origination, complex negotiation, ethical oversight of AI-driven insights, and fostering irreplaceable human client relationships.

Risk

Radical role overhaul; pervasive automation leading to significant workflow redefinition and specialized human focus.

The Investment Banker role is undergoing a profound and accelerating redefinition by AI. AI will assume command of vast routine data collection, initial financial modeling, and much of the administrative burden. Investment Bankers must immediately pivot to becoming experts in leveraging AI for hyper-efficiency and enhanced strategic insights, intensely validating AI outputs for accuracy and fairness, and dedicating their expertise to the irreplaceable human elements of the role: profound relationship building, nuanced negotiation, and critical ethical decision-making regarding high-stakes transactions and market impact.

Sector readiness

Rapid & Transformative Integration

The investment banking and financial advisory sectors are aggressively integrating AI, driven by overwhelming demand for efficiency, speed in deal execution, and advanced analytical capabilities. AI is rapidly moving beyond pilot stages to widespread adoption for valuation, due diligence, and market analysis, fundamentally altering traditional workflows and competitive dynamics.

§ 02 POSITION

Where you stand

i The Investment Banker role is undergoing a profound and accelerating redefinition by AI, fundamentally restructuring financial modeling, due diligence, and market analysis.

ii AI will autonomously manage vast data, optimize valuations, and streamline documentation, compelling Bankers to pivot to indispensable deal origination and profound human client relationships.

iii Survival and impact will hinge on Investment Bankers mastering AI tools, critically validating AI outputs for accuracy and ethics, championing ethical AI, and providing irreplaceable human judgment and advocacy at the heart of high-stakes transactions.

§ 03 ACTIONS 15 POINTS

What this means for you

Concrete changes to how the work gets done, in the order you are likely to meet them.

01 **AI-Driven Autonomous Due Diligence.** Investment Bankers will oversee AI systems that autonomously process vast amounts of unstructured data (e.g., contracts, financial statements, emails, news, legal documents) from target companies during M&A. The AI will identify key risks, liabilities, and opportunities with unprecedented speed and precision.

02 **AI-Powered Valuation & Financial Modeling.** AI tools will autonomously build initial valuation models (e.g., DCF, comps), assess financial health, and perform sensitivity analysis based on complex financial data and market assumptions. Investment Bankers will rigorously review and refine these AI outputs, focusing on strategic adjustments and nuanced assumptions.

03 **Predictive Analytics for M&A Target Identification.** Investment Bankers will leverage AI models that autonomously scan global company databases, industry trends, and financial metrics to identify optimal M&A targets. The AI predicts strategic fit, synergy potential, and acquisition feasibility, accelerating deal origination.

04 **Generative AI for Pitch Books & Deal Documentation.** AI can autonomously draft initial versions of pitch books, offering memorandums (OMs), and complex legal/financial documentation for deals. This streamlines content creation, ensuring consistency and allowing Investment Bankers to focus on strategic storytelling and client customization.

05 **AI-Assisted Market & Industry Analysis.** AI tools will autonomously scan vast amounts of market data, industry reports, and competitor intelligence to identify emerging trends, valuation benchmarks, and capital market opportunities. Investment Bankers will leverage these insights for strategic advisory.

06 **Focus on Nuanced Client Relationship & Deal Origination.** As AI assumes command of data-driven tasks, the paramount value of Investment Bankers will be their irreplaceable human ability to build profound, trust-based relationships with C-suite executives, understand their strategic needs, and originate high-value, complex deals.

07 **AI-Driven Deal Execution & Project Management.** AI will autonomously manage deal execution workflows, track milestones, monitor regulatory approvals, and flag potential delays in complex transactions. Investment Bankers will oversee these automated processes, intervening for critical decision points and unforeseen obstacles.

08 **Ethical AI in Deal-Making & Bias Mitigation.** Investment Bankers will bear profound responsibility for auditing AI systems for algorithmic bias (e.g., in target identification, valuation), ensuring data privacy for sensitive deal information, and upholding the highest ethical standards for fair and equitable transactions.

09 **Human-AI Teaming for Transaction Management.** Investment Bankers will operate in seamless human-AI teams. AI will process vast data, generate insights, and automate routine tasks, while the human banker leads strategic negotiation, manages complex legal/financial aspects, and ensures seamless deal closure.

10 **AI for Capital Markets Insights.** For ECM (Equity Capital Markets) and DCM (Debt Capital Markets) bankers, AI will autonomously analyze market sentiment, investor demand, and pricing trends to optimize capital raising strategies. AI helps identify optimal timing and structure for issuances.

11 **Continuous Learning & FinTech/AI Literacy.** The exponential pace of AI integration in investment banking demands that Investment Bankers commit to continuous, aggressive learning of new AI-powered tools, advanced financial modeling, and their profound capabilities and ethical implications, as a foundational competency.

12 **Specialization in AI-Driven Transaction Advisory.** The field will see a rise in Investment Bankers specializing in advising clients on AI-related M&A (e.g., acquiring AI startups), or leveraging AI to optimize transaction processes themselves.

13 **AI-Powered Regulatory Compliance & AML.** AI systems will autonomously monitor financial transactions for compliance with anti-money laundering (AML), KYC (Know Your Customer), and other complex financial regulations. Investment Bankers will oversee these systems, mitigating compliance risks.

14 **Leadership in Deal Origination & Innovation.** Investment Bankers in leadership roles will play a crucial role in guiding their firms through the pervasive adoption of AI, advocating for strategic AI solutions, and fundamentally reshaping the future of deal-making and financial advisory.

15 **Strategic Negotiation & Deal Structuring.** As AI streamlines analysis, the human skill of Investment Bankers in masterfully negotiating complex deal terms, structuring innovative financial solutions, and resolving disputes among multiple parties becomes paramount.

§ 04 CAUSES 10 DRIVERS

What is pushing this change

01 **Explosive Growth of Financial & Unstructured Data.** Vast amounts of public and private financial data, news, contracts, and internal communications provide rich input for AI models.

02 **Advancements in AI/ML (NLP, Predictive Analytics, Generative AI).** Breakthroughs in AI fields enable sophisticated text understanding, autonomous content generation, and intelligent predictions for financial transactions.

03 **Urgent Demand for Speed & Efficiency in Deal Execution.** Clients demand faster M&A cycles, rapid capital raising, and efficient due diligence, compelling AI adoption.

04 **Complexity of Global M&A & Capital Markets.** Managing cross-border M&A, complex financial instruments, and intricate regulatory frameworks is challenging; AI assists.

05 **Need for Proactive Risk Management & Due Diligence.** AI can identify hidden risks, potential liabilities, and flag non-compliance in vast datasets, enhancing due diligence.

06 **Shortage of Skilled Junior Bankers (Analyst/Associate Level).** AI automates repetitive tasks, allowing senior bankers to focus on high-value client interaction and deal strategy.

07 **Client Expectations for Data-Driven & AI-Powered Advice.** Clients increasingly expect data-driven insights and AI-powered tools for deal analysis and strategic advice.

08 **Intense Competition in Investment Banking.** AI is used by competitors for strategic advantage, compelling firms to adopt AI for deal origination and execution.

09 **Regulatory Scrutiny of Financial Transactions.** AI assists in monitoring compliance with AML, KYC, and other regulations, promoting transparency and accountability.

10 **Focus on ESG & Sustainable Finance.** AI can help analyze ESG data of target companies for M&A due diligence, reflecting growing investor demand.

§ 05 VARIATION 5 SECTORS

Impact by sector

The headline figure is an average. Where you work changes the picture.

M&A Bankers (Mergers & Acquisitions)	AI for autonomous due diligence, valuation modeling, and target identification. Focus on deal origination and complex negotiation.
ECM Bankers (Equity Capital Markets)	AI for market sentiment analysis, investor matching, and optimizing deal timing/pricing for equity issuances. Focus on capital raising strategy.
DCM Bankers (Debt Capital Markets)	AI for credit risk analysis, bond pricing, and optimizing debt structuring. Focus on capital raising strategy and market insights.
Restructuring & Special Situations Bankers	AI for distressed asset valuation, legal document analysis, and identifying restructuring opportunities. Focus on complex problem-solving in distressed situations.
Junior Bankers (Analyst/Associate)	Highest impact; AI for automating financial modeling, data collection, pitch book drafting, and routine administrative tasks. Focus shifts to oversight and learning.

§ 06 PREPARATION 8 SKILLS

Skills to build

The skills that keep the human part of this work valuable as the routine part is automated.

01 **Strategic Relationship Building & Deal Origination.** The irreplaceable human ability to build deep, trust-based relationships with C-suite executives and originate high-value, complex transactions.

02 **AI/FinTech Literacy & Advanced Modeling.** Proficiency in using AI-powered valuation tools, due diligence platforms, and understanding AI's role in complex financial modeling.

03 **Complex Negotiation & Deal Structuring.** Mastery of multi-party negotiations, resolving disputes, and structuring innovative financial solutions for clients.

04 **Ethical AI & Compliance.** Upholding the highest ethical standards, ensuring client data privacy, and rigorously auditing AI outputs for fairness and compliance in deal-making.

05 **Market Acumen & Industry Expertise.** Deep understanding of specific industries (e.g., tech, healthcare, energy) and their unique market dynamics and competitive landscapes.

06 **Data Analysis & Prescriptive Insights.** Ability to autonomously analyze vast financial and market data, synthesize complex information, and generate prescriptive insights that drive deal success.

07 **Communication & Persuasion.** Expertly structuring compelling deal narratives, delivering impactful presentations, and influencing executive decisions through data-driven recommendations.

08 **Adaptability & Continuous Learning.** Willingness to rapidly learn new AI technologies, adapt deal-making methodologies, and stay updated on evolving financial markets and regulations.

§ 07 INSTRUMENTS 12 ENTRIES

Tools in use

KINDS OF TOOL WORTH KNOWING

01 **AI-Powered M&A Platforms (Targeting/Due Diligence).** Platforms that use AI to autonomously identify M&A targets, perform due diligence, and analyze synergies.

02 **AI for Financial Modeling & Valuation.** Software that leverages AI to autonomously build complex financial models (e.g., DCF, LBO), perform valuation, and conduct sensitivity analysis.

03 **Generative AI for Pitch Books & Documentation.** Large Language Models (LLMs) used to autonomously draft initial versions of pitch books, offering memorandums, and deal-related legal documents.

04 **AI for Market Sentiment & Capital Markets Insights.** AI models that autonomously analyze real-time market data, news, and social media sentiment to predict market demand and pricing for capital issuances.

05 **AI for Contract Analysis (Legal Due Diligence).** AI tools that autonomously analyze vast volumes of contracts, identifying key clauses, obligations, and potential risks during legal due diligence.

06 **Predictive Analytics for Deal Outcomes.** AI models that autonomously analyze historical deal data, market conditions, and transaction characteristics to predict the likelihood of successful deal closure.

NAMED TOOLS ALREADY IN USE

Acuris (DealReporter, Mergermarket) / Datasite (Due Diligence Platform with AI) VISIT
Leading platforms for M&A intelligence and due diligence, increasingly integrating AI for data analysis and target identification.

S&P Global Market Intelligence (Capital IQ with AI) / Bloomberg Terminal (AI tools) VISIT
Leading financial data and analytics platforms that use AI for advanced financial modeling and valuation.

ChatGPT / Claude / Google Gemini (for drafting) VISIT
Generative AI models that can autonomously draft various investment banking documents, from marketing materials to legal documents.

Refinitiv Eikon (now LSEG Workspace with AI) / FactSet (with AI features) VISIT
Leading financial information platforms that leverage AI for real-time market sentiment analysis and capital markets insights.

Kira Systems / Luminance (Contract Analysis) VISIT

AI-powered platforms specializing in automated contract review and analysis for legal due diligence in M&A transactions.

Proprietary AI models (developed by investment banks) VISIT

AI/ML models developed by investment banks for internal use to predict deal success rates and optimize deal strategies.

§ 08 EXAMPLES 5 EXAMPLES

In practice

Ways people in this role are already using AI, and what they get from it.

Automate Due Diligence Review

EXAMPLE 1

HOW Investment Bankers will oversee an AI system that autonomously sifts through vast unstructured data (e.g., contracts, legal filings, emails, news articles) from a target company during M&A due diligence. The AI will identify key risks, liabilities, and opportunities for review.

GAIN Significantly reduces manual due diligence time, uncovers hidden risks, and provides a more comprehensive overview of target companies.

Generate Valuation Models

EXAMPLE 2

HOW Investment Bankers will instruct an AI tool to autonomously build an initial Discounted Cash Flow (DCF) or comparable company analysis (CCA) valuation model. By providing high-level financial data and assumptions, the AI will generate the full model for refinement.

GAIN Accelerates financial modeling, ensures consistency in valuation methodologies, and allows bankers to focus on strategic assumptions and deal structuring.

Identify M&A Targets

EXAMPLE 3

HOW Investment Bankers will leverage an AI platform that autonomously scans global company databases, industry trends, and financial metrics. The AI identifies potential M&A targets that align with a client's strategic goals and predicts synergy potential, accelerating deal origination.

GAIN Provides highly accurate and rapid target identification, streamlines deal origination, and identifies strategic opportunities that might be missed manually.

Draft Pitch Book Sections

EXAMPLE 4

HOW Investment Bankers can instruct a generative AI tool to draft sections of a pitch book for a client presentation. By providing deal objectives and key talking points, the AI will autonomously generate slides, narrative, and supporting data summaries.

GAIN Saves significant time on document creation, ensures consistent messaging, and allows bankers to focus on strategic storytelling and client customization.

Predict Deal Success Probability

EXAMPLE 5

HOW Investment Bankers will deploy an AI model that autonomously analyzes historical deal data, market conditions, and transaction characteristics. The AI will predict the probability of a proposed M&A deal successfully closing, informing strategic decision-making and negotiation.

GAIN Provides data-backed insights into deal feasibility, supports more effective negotiation strategies, and improves the likelihood of successful deal closure.

§ 09 CONTEXT

How this role compares

Three neighbouring roles chosen to show the direction of travel.

Junior Analysts (Routine modeling, data collection) / Associates (Pitch book drafting)

MORE EXPOSED

AI IMPACT Catastrophic (AI can autonomously build initial financial models; AI can draft pitch book sections and collect data.)

WORK MOVES TO Immediate need for radical re-skilling into AI oversight, complex model validation, or specialization in strategic deal origination.

AI Financial Engineers / AI M&A Data Scientists

DIFFERENT SKILLS, GROWING

AI IMPACT Foundational (They design and build the AI algorithms and systems that power advanced financial modeling and M&A analytics.)

WORK MOVES TO Deep expertise in AI/ML algorithms, quantitative finance, data science, and software engineering, with a focus on investment banking applications.

Client Relationship Managers (High-net-worth clients) / Equity Research Analysts (Fundamental research)

COMPLEMENTARY, LESS EXPOSED

AI IMPACT Low-Moderate Augmentation (AI assists in client data analysis for RMs; AI helps with research for ERAs), but core human relationship building, executive presence, and nuanced fundamental analysis remain paramount.

WORK MOVES TO Building long-term, high-trust client relationships (Relationship Managers); Deep fundamental research, industry expertise, and unique investment theses (Equity Research Analysts).

§ 10 VERDICT

Closing judgement

> For Investment Bankers, AI is not merely a tool but a radical force of transformation that will fundamentally redefine deal-making. It will autonomously handle the mundane, amplify strategic insights, and streamline complex transactions, compelling bankers to pivot to indispensable deal origination, profound client relationships, and ethical oversight. The future Investment Banker will be a visionary orchestrator of human-AI collaboration, providing irreplaceable judgment and advocacy at the heart of high-stakes financial transactions.

§ 11 BASIS REVISED 5 OCTOBER 2026

Evidence and revisions

What the exposure figure rests on, what changed when it was last revised, and the published work cited for this role.

SCORE

65 to 66

WINDOW

2-5 years (unchanged)

The 5 October 2026 review moved the score up by 1 points.

Exposure Index v2. Inputs: task applicability 51/100 (Microsoft AI applicability score 0.26 for Financial and investment analysts; Securities, commodities, and financial services sales agents); observed usage 68/100 (Anthropic observed exposure 0.51); official exposure tier 100/100 (BLS: very high); labour-market trajectory 39/100 (BLS projects employment to grow 4.3% over 2025–35); published adoption rating 70/100 (high adoption). Weighted base 65.8. Final score 66. The previous figure of 65 was raised by 1 point, a small change that comes from moving off scores rounded to the nearest five. The change window is unchanged.

HOW THE FIGURE IS BUILT (EXPOSURE INDEX V2)

Task applicability — Microsoft Research, AI applicability score	51 × 35%	17.8
Observed usage — Anthropic Economic Index, observed exposure	68 × 20%	13.5
Official exposure tier — US BLS AI-exposure category	100 × 20%	20.0
Labour-market trajectory — US BLS projected employment change 2025–35	39 × 10%	3.9
Published adoption rating — This report's adoption level	70 × 15%	10.5
Weighted base		65.8
Exposure score		66

MEASURES BEHIND THE SCORE

US Bureau of Labor Statistics · *Employment Projections 2025–35 and AI Exposure Categories* (27 August 2026)

AI-exposure tier: Very high. Projected employment change 2025–35: +4.3%. Matched to Financial and investment analysts; Securities, commodities, and financial services sales agents.

PUBLISHER PDF ARCHIVED COPY

Microsoft Research · *Working with AI: Measuring the Applicability of Generative AI to Occupations* (10 July 2025)

AI applicability score 0.26 (percentile 82 of 785 occupations) for SOC 13-2051, 41-3031.

PUBLISHER PDF ARCHIVED COPY

Anthropic · *Anthropic Economic Index report: Cadences* (26 June 2026)

Observed exposure 0.51 for SOC 13-2051, 41-3031 (percentile 99 of 756 occupations).

PUBLISHER PDF

World Economic Forum · *The Future of Jobs Report 2025* (7 January 2025)

Accountants and auditors appear on the WEF fastest-declining list for 2030, while fintech engineers and big-data specialists lead the growing list; finance roles that pivot toward data and judgement fare best.

PUBLISHER PDF

UK Department for Science, Innovation and Technology · *Assessment of AI capabilities and the impact on the UK labour market* (28 January 2026)

UK context: around 70% of UK workers are in occupations with tasks AI could perform or enhance, above the US average; a one-standard-deviation rise in exposure was associated with a 3.9% fall in UK job postings.

PUBLISHER ARCHIVED COPY

ALSO CITED FOR THIS ROLE

PwC · *2026 Global AI Jobs Barometer* (May 2026)

PwC finds the most exposed roles adding judgement- and empathy-heavy tasks 2.5 times faster than the least exposed, and a 62% wage premium for AI skills: exposure in finance is raising the value of advisory work.

PUBLISHER PDF

Archived copies are served only where the licence permits; otherwise the link goes to the publisher. Full research library: https://www.careerguard.ai/sources

§ 12 APPENDIX

Method and sources

Each report was written from a large body of published research. The exposure score itself is computed, not written: it is the CareerGuard Exposure Index, a weighted average of occupation-level measures from the US Bureau of Labor Statistics (AI-exposure classification and 2025–35 projections), Microsoft Research (AI applicability scores) and Anthropic (observed exposure), together with the adoption rating published on the report. The organisations and publications below are the standing literature behind the narrative sections. Every source, with dates, licences and archived copies where we are permitted to hold them, is catalogued in the research library.

Exposure Index v2 (October 2026). Each input is scaled to 0–100 and weighted: task applicability 35% (Microsoft AI applicability score ÷ 0.5), observed usage 20% (Anthropic observed exposure ÷ 0.75), official exposure tier

20% (BLS very high = 100, high = 70, moderate = 40, low = 10), labour-market trajectory 10% (50 2.5 × projected % employment change), published adoption rating 15% (very high = 85, high = 70, medium-high = 55, medium = 40, low-medium = 25, low = 10). Inputs not measured for an occupation are dropped and the remaining weights renormalised. An editorial adjustment of at most ±12 points is allowed only for automation channels the measures cannot see (robotics, self-service, machine vision, medical imaging, RPA/OCR, generative video) and is always logged with its reason. Scores are whole numbers, not rounded to five. The change window shifts one notch (a year at each end) per ten points of movement.

I GLOBAL AND MACROECONOMIC IMPACT OF AI ON WORK

World Economic Forum

The Future of Jobs Report series — Employer survey of expected job growth and decline, skill shifts and technology adoption (2020, 2023 and 2025 editions); Artificial Intelligence and the Future of Entry-Level Work (2026).
AI governance and transformation reports — Frameworks on ethical AI, talent strategy and industry transformation.

McKinsey Global Institute

AI, Automation and the Future of Work series — Research quantifying automation potential by task, sector and demographic, from "Jobs Lost, Jobs Gained" to "Agents, robots, and us" (2025).
Industry-specific reports — Financial services, healthcare, manufacturing and others.

PwC

Global AI Jobs Barometer — Annual analysis of job postings and productivity by AI exposure (2024–2026 editions).
Upskilling Hopes and Fears survey — Employee perceptions and readiness.

Microsoft Research and Anthropic

Working with AI (2025); Anthropic Economic Index (2025–2026) — Occupation-level usage data from Copilot and Claude conversations, the two observed-usage measures behind the 2026 revision.

Stanford Digital Economy Lab and Stanford HAI

Canaries in the Coal Mine? (2025–2026); AI Index Report (annual) — Payroll evidence on early-career employment in exposed occupations; annual measurement of AI capability, investment and adoption.

Deloitte

Human Capital Trends series — Workforce, talent and HR technology trends.
Tech Trends series — Emerging technologies and their business implications.

Accenture

Technology Vision series — Forward-looking analysis of emerging technology, with emphasis on AI.
Fjord Trends — Design, innovation and human experience in a digital world.

Boston Consulting Group

AI/ML insights and industry solutions — "The AI Revolution in the Workplace" and related research.

EY

AI and workforce reports — Adoption, talent strategy and ethics.

IBM Institute for Business Value

AI and automation studies — Business models, workforce evolution and leadership.

OECD

AI Policy Observatory — International data and policy on AI, labour markets and skills.
Employment Outlook — Labour-market trends including technological impact (2023–2026 editions).

International Labour Organization

Generative AI and Jobs: A Refined Global Index of Occupational Exposure (2025) — Task-level exposure gradients for every ISCO occupation; successor to the 2023 global index.

International Monetary Fund

Staff Discussion Notes on AI and work (2024, 2026) — Complementarity framing: where AI augments and where it substitutes.

UK Department for Science, Innovation and Technology
Assessment of AI capabilities and the impact on the UK labour market (2026) — UK occupational exposure and job-posting evidence.

Brookings Institution
AI and automation research — Economic and social implications, displacement and skills.

Yale Budget Lab and Goldman Sachs Research
Tracking the Impact of AI on the Labor Market; AI and the US labour market (2026) — Aggregate labour-market monitoring; macro displacement estimates.

Oxford University (Oxford Martin School)
The Future of Employment — Frey & Osborne and subsequent research on susceptibility to automation.

MIT Technology Review
AI & Work — Reporting on AI research and its implications for industries and jobs.

Gartner
Hype Cycle for Artificial Intelligence — Maturity and adoption of AI technologies.
Future of Work reports — Workplace models and talent strategy.

U.S. Bureau of Labor Statistics
Employment Projections 2025–35; AI Exposure Categories; Occupational Outlook Handbook — Ten-year employment projections and, from the 2025 cycle, an AI-exposure tier for every detailed occupation.

Indeed Hiring Lab
AI at Work Report (2025) and posting-market updates — Skill-level transformation estimates and job-posting trends by occupation.

II CORE AI AND MACHINE-LEARNING RESEARCH

OpenAI
Research papers, blog and API documentation — Large language models, generative AI, safety and societal impact.

Google DeepMind
Research papers and blog — Reinforcement learning, AI for science, AGI and ethics.

Meta AI
Research papers and blog — Large language models, computer vision, AI for social good.

Hugging Face
Transformers library and model hub — Open-source state-of-the-art NLP models.

TensorFlow and PyTorch
Documentation and community forums — Core frameworks illustrating practical capability.

arXiv
cs.AI, cs.LG, cs.CV, cs.CL — Pre-print research.

NeurIPS and ICML
Conference proceedings — Top-tier academic research.

ACM and IEEE
Journals and proceedings — ACM Computing Surveys; IEEE Transactions on AI.

Kaggle
Datasets and competition solutions — Applied machine learning on real-world problems.

The Alan Turing Institute
Research and reports — Responsible and applied AI.

III ETHICAL AND RESPONSIBLE AI DEPLOYMENT

NIST

AI Risk Management Framework — Voluntary framework for managing AI risk.

European Commission

AI Act — Risk-tiered legal framework for AI.

Ethics Guidelines for Trustworthy AI — Principles for responsible development.

Partnership on AI

Research and best practice — Responsible AI development.

AI Now Institute

Annual reports — Social implications: power, inequality, rights.

ACM FAccT

Proceedings — Fairness, accountability and transparency.

Data & Society

Publications — Social implications of data-centric technology.

WIPO

Conversation on IP and AI — Intellectual-property implications of AI.

IEEE Global Initiative on Ethics of A/IS

Ethically Aligned Design — Recommendations for ethical AI design.

Center for AI and Digital Policy

Policy briefs — Accountable AI policy.
