AI IMPACT REPORT NO. 212 · REVISED 5 OCTOBER 2026 · 250 ROLES COVERED

News Analysts, Reporters, and Journalists

AI profoundly augmenting content generation, research, and data analysis, shifting focus to investigative journalism and narrative shaping.

EXPOSURE	WINDOW	ADOPTION TODAY	READING
69 High exposure	2–5 yrs until change lands	High	Substantial automation of routine work. Exposure is the share of today's work AI can plausibly take on within the window.

§ 01 WHAT IS HAPPENING

What is happening to news analysts, reporters, and journalists

Impact

AI tools are automating text generation, summarization, research synthesis, and basic fact-checking. This shifts News Analysts, Reporters, and Journalists' focus towards in-depth investigative journalism, critical verification, nuanced storytelling, ethical oversight of AI, and building community trust.

Risk

Significant augmentation; emphasis on critical thinking, verification, and human-centric storytelling.

The News Analyst, Reporter, and Journalist role will be heavily augmented by AI. AI will handle many routine text-generation, summarization, and data-gathering tasks. Professionals in these fields will need to become adept at leveraging AI tools, critically evaluating AI-generated content for accuracy and bias, focusing on investigative journalism, unique voice, and nuanced human-interest stories. Ethical considerations around originality, deepfakes, misinformation, and intellectual property will be paramount.

Sector readiness

Rapid & Experimental Integration

The media and journalism industry is rapidly adopting AI for efficiency and new possibilities in content creation, data analysis, and distribution. Many news organizations and individual journalists are actively experimenting with and integrating AI tools into their workflows, although questions around intellectual property, authenticity, and ethical use are being fiercely debated and shaped.

§ 02 POSITION

Where you stand

i The News Analyst, Reporter, and Journalist role is undergoing a radical transformation, with AI autonomously executing a vast portion of routine content generation and research.

ii AI provides unprecedented capabilities for autonomous content creation, data analysis, and trend spotting, compelling professionals to pivot to in-depth investigative journalism, critical verification, and nuanced human-centric storytelling.

iii Survival and impact will hinge on mastering AI tools as autonomous co-pilots, rigorously validating AI outputs for accuracy and bias, championing ethical AI, and providing irreplaceable human insight and trust-building in an increasingly complex and AI-driven information landscape.

§ 03 ACTIONS 15 POINTS

What this means for you

Concrete changes to how the work gets done, in the order you are likely to meet them.

01 **AI-Accelerated Research & Data Mining.** News Analysts, Reporters, and Journalists are leveraging AI to rapidly sift through vast amounts of information—public records, scientific papers, social media feeds, financial reports—to identify key trends, uncover hidden connections, and extract relevant data points for investigative pieces.

02 **Automated Content Drafting (First Pass).** Journalists will increasingly utilize AI to generate initial drafts of various text types, from routine news summaries, market updates, and sports reports to early outlines for longer-form articles. This frees up time from repetitive writing tasks, allowing focus on in-depth reporting and interviews.

03 **AI-Powered Fact-Checking & Verification Assistance.** News Analysts, Reporters, and Journalists are employing AI tools that can quickly cross-reference factual claims against multiple reliable sources, identify potential misinformation, and flag inconsistencies. This augments the critical verification process in an era of rapid information dissemination.

04 **Intelligent Trend Identification & Story Spotting.** AI tools are analyzing vast news feeds, social media conversations, and public data to identify emerging trends, unusual events, or underreported stories. This allows Journalists to spot potential narratives earlier and prioritize investigations based on data-driven insights.

05 **Automated Translation & Localization for Global Reach.** AI translation tools are rapidly improving, providing quick and accessible translations of foreign language reports, interviews, or social media content. Journalists can use this for a first pass, then refine for cultural nuance and accuracy, expanding their global reporting capabilities.

06 **Focus on Investigative Journalism & Deep Dive Reporting.** As AI handles routine content and basic data gathering, the core value of News Analysts, Reporters, and Journalists will shift profoundly towards in-depth investigative journalism, uncovering complex truths, and holding power accountable through meticulous, human-led research and analysis.

07 **Prompt Engineering for Content Generation & Analysis.** Journalists must master the art of "prompt engineering"—crafting precise and effective textual inputs to guide generative AI tools to produce desired content drafts, research summaries, or analytical insights. The ability to articulate clear requirements to AI will be a key skill.

08 **AI for Sentiment Analysis & Audience Engagement.** News Analysts and Journalists are using AI tools to analyze reader comments, social media sentiment, and engagement metrics related to their articles. This provides data-driven insights into audience reception, allowing for iterative improvements to content strategies and understanding public opinion.

09 **Ethical AI, Deepfakes & Misinformation Combat.** News Analysts, Reporters, and Journalists will be at the forefront of navigating the complex ethical landscape of AI, particularly concerning deepfakes, manipulated media, and the spread of misinformation. Their role will involve critical verification, transparency, and educating the public.

10 **Data-Driven Storytelling & Visualization.** Journalists are leveraging AI tools to analyze complex datasets and transform them into compelling data visualizations and interactive stories. This enhances clarity, makes complex information accessible, and allows for more impactful communication of findings.

11 **Human-AI Teaming for Enhanced Reporting.** News Analysts, Reporters, and Journalists will increasingly operate in human-AI teams. AI acts as an intelligent research assistant, data analyst, and content drafting co-pilot, freeing the human journalist to focus on interviews, critical verification, narrative shaping, and direct community interaction.

12 **AI for Personalizing News Delivery (Ethical Consideration).** While AI can personalize news feeds, Journalists will engage with the ethical implications of filter bubbles and algorithmic bias in news consumption. Their role will involve ensuring balanced reporting and advocating for responsible AI use in news distribution.

13 **Continuous Learning & Digital Literacy.** The rapid pace of AI development means News Analysts, Reporters, and Journalists must commit to continuous learning, exploring new AI tools, understanding their capabilities and limitations, and adapting their workflows to leverage these technologies effectively while maintaining journalistic integrity.

14 **Building Trust & Community Connection.** As AI becomes more prevalent in content creation, the irreplaceable human element of building trust with sources, engaging directly with communities, and fostering local connections will become even more paramount for News Analysts, Reporters, and Journalists.

15 **Automated Content Archiving & Search.** AI tools are streamlining the archiving and retrieval of vast news content. Journalists can use AI to quickly search through historical articles, broadcast footage, and internal databases based on content, sentiment, or specific events, improving institutional knowledge.

§ 04 CAUSES 10 DRIVERS

What is pushing this change

01 **Explosive Growth of Information & Data.** The sheer volume of online information, social media content, and digital documents necessitates AI for analysis and synthesis.

02 **Advancements in Generative AI (Text, Voice, Video).** Breakthroughs in AI fields enable sophisticated text generation, voice cloning, and video manipulation, fundamentally changing content creation.

03 **Urgent Demand for Speed in News Cycle.** News organizations operate under constant pressure to deliver breaking news and updates faster than ever.

04 **Proliferation of Misinformation & Deepfakes.** AI-generated deepfakes and misinformation campaigns pose a significant threat to journalistic integrity, demanding AI-powered detection.

05 **Need for Personalized News Delivery.** Audiences expect news tailored to their interests, but also struggle with filter bubbles; AI plays a role in both.

06 **Pressure for Cost Reduction in Media Industry.** Automating routine reporting, content generation, and administrative tasks can significantly reduce operational costs for news outlets.

07 **Shortage of Specialized Investigative Journalists.** AI can augment research and data analysis, but highly specialized investigative journalism still requires deep human expertise.

08 **Global Demand for Local & Diverse News.** AI can assist in generating local news content or translating foreign news, expanding coverage for diverse audiences.

09 **Digital Transformation in Media Organizations.** News organizations are undergoing digital transformation, with AI at the core of content production, distribution, and monetization.

10 **Audience Expectation for Interactive & Data-Rich News.** Audiences expect more than just text; they want interactive graphics, data visualizations, and personalized experiences with news content.

§ 05 VARIATION 5 SECTORS

Impact by sector

The headline figure is an average. Where you work changes the picture.

Investigative Journalists	AI for data mining, pattern recognition in large datasets, and uncovering hidden connections. Focus on deep research and exposing truths.
General Assignment Reporters	AI for drafting routine reports, summarizing events, and transcribing interviews. Focus on breaking news, interviews, and on-the-ground reporting.
News Analysts (Data-focused)	Heavy reliance on AI for sentiment analysis, trend spotting, and data visualization. Focus on interpreting complex data for public understanding.
Broadcast Journalists (TV/Radio)	AI for script generation, voice-to-text for interviews, and automated subtitling. Focus on live reporting, interviewing skills, and on-camera presence.
Photojournalists / Visual Journalists	AI for image analysis (object recognition, tagging), photo editing (background removal), and visual storytelling tools. Focus on capturing authentic moments and visual narrative.

§ 06 PREPARATION 8 SKILLS

Skills to build

The skills that keep the human part of this work valuable as the routine part is automated.

01 **Critical Thinking & Skepticism.** Ability to question AI outputs, identify biases, and analyze complex information with an independent, discerning mind.

02 **AI Tool Proficiency & Prompt Engineering.** Skillfully crafting inputs for AI tools and effectively using various generative AI and analytical AI platforms for research and content creation.

03 **Fact-Checking & Verification.** Meticulous dedication to verifying information, cross-referencing sources, and debunking misinformation or manipulated content.

04 **Ethical AI & Misinformation Literacy.** Understanding the ethical implications of AI in journalism (e.g., deepfakes, algorithmic bias) and ensuring responsible, transparent reporting.

05 **Narrative & Storytelling Craft.** Developing compelling narratives, structuring engaging stories, and infusing human perspective and emotional depth into news content.

06 **Data Analysis & Visualization.** Ability to interpret complex datasets, identify trends, and translate data into clear, compelling visualizations and interactive stories.

07 **Interviewing & Communication Skills.** Skill in conducting interviews, active listening, asking probing questions, and effectively communicating information in various formats.

08 **Adaptability & Digital Literacy.** Willingness to learn new AI technologies, adapt journalistic workflows, and continuously update skills in a rapidly evolving media landscape.

§ 07 INSTRUMENTS 12 ENTRIES

Tools in use

KINDS OF TOOL WORTH KNOWING

01 **Generative AI Writing Assistants.** Platforms that can generate news summaries, routine reports, and draft articles from provided information.

02 **AI-Powered Research & Data Mining Tools.** Tools that rapidly sift through vast datasets (e.g., public records, financial reports) and web content to extract relevant information and patterns.

03 **AI for Fact-Checking & Verification.** AI tools that automatically cross-reference factual claims against multiple reliable sources, identify potential misinformation, and flag inconsistencies.

04 **AI-Enhanced Transcription & Summarization.** Software that uses AI to transcribe audio/video accurately and generate concise summaries of interviews or long reports.

05 **AI for Sentiment Analysis & Trend Spotting.** AI platforms that analyze social media conversations, news articles, and other text sources to identify sentiment, emerging topics, and trending narratives.

06 **Data Visualization Tools (AI-augmented).** BI tools and specialized visualization software that incorporate AI for automated chart suggestions, insights, and interactive data storytelling.

NAMED TOOLS ALREADY IN USE

ChatGPT / Claude / Google Gemini VISIT
Leading Large Language Models (LLMs) used for general text generation, news drafting, and research assistance.

Elicit.org / Perplexity AI / Palantir (for data integration) VISIT
AI-powered research assistants and data intelligence platforms that help journalists discover and synthesize information from vast sources.

NewsGuard (AI-enabled) / Factmata (AI-driven) VISIT
AI-powered tools and services that analyze news sources for credibility and flag misinformation or biased content.

Descript / Trint / Otter.ai VISIT
AI-powered platforms that transcribe audio and video, providing time-coded text and intelligent summaries for efficient content analysis.

Brandwatch / Meltwater (with AI insights) VISIT

Leading social listening and media monitoring platforms that leverage AI for sentiment analysis and trend identification.

Tableau / Power BI (with AI features) VISIT

Leading data visualization tools that incorporate AI for automated insights, natural language queries, and enhanced visual storytelling.

§ 08 EXAMPLES 5 EXAMPLES

In practice

Ways people in this role are already using AI, and what they get from it.

Automate Routine News Summaries

EXAMPLE 1

HOW Utilize an AI writing assistant to autonomously generate daily news summaries for routine events (e.g., stock market updates, local weather, sports scores) from structured data or brief inputs. The journalist then reviews and publishes these.

GAIN Radically reduces manual reporting time for routine news, ensures consistency, and allows journalists to focus on more complex, impactful stories.

Conduct AI-Powered Investigative Research

EXAMPLE 2

HOW News Analysts will command an AI-powered research platform to autonomously sift through millions of public records, financial filings, and open-source intelligence. The AI identifies hidden connections, suspicious transactions, or patterns of misconduct, providing leads for in-depth human investigation.

GAIN Provides unprecedented investigative capability, uncovers leads that would be impossible to find manually, and significantly accelerates complex investigations.

Fact-Check Claims in Real-Time

EXAMPLE 3

HOW Reporters will use an AI fact-checking tool during live reporting or research. The AI autonomously cross-references factual claims against multiple reliable sources in real-time, instantly flagging potential inaccuracies or misinformation for immediate verification.

GAIN Dramatically improves accuracy of reporting, builds public trust, and acts as a critical defense against the proliferation of misinformation.

Generate Draft News Articles

EXAMPLE 4

HOW Journalists can instruct a generative AI model to draft an initial news article based on key bullet points, interview transcripts, and collected data. The AI autonomously structures the narrative, which the journalist then refines, adds original quotes, and ensures unique voice.

GAIN Saves significant writing time, provides a structural foundation for articles, and allows journalists to focus on in-depth interviews and adding unique human perspectives.

Detect Emerging Trends for Stories EXAMPLE 5	HOW	News Analysts will deploy an AI system that autonomously monitors global news feeds, social media platforms, and online forums. The AI detects subtle shifts in public sentiment, identifies emerging topics, and predicts which narratives are likely to gain traction, guiding editorial decisions.
	GAIN	Enables proactive news coverage, allows identification of trending topics before they become mainstream, and ensures news outlets remain highly relevant and responsive to public interest.

§ 09 CONTEXT

How this role compares

Three neighbouring roles chosen to show the direction of travel.

Content Summarizers / Basic News Aggregators (Purely mechanical text transformation) MORE EXPOSED	AI IMPACT	Catastrophic (AI can autonomously summarize articles, aggregate news, and generate basic reports with high speed and accuracy.)
	WORK MOVES TO	Immediate need for radical re-skilling into AI oversight, validating AI-generated content, or specializing in human-led investigative journalism.
AI Ethicists (Media) / Computational Journalists / AI Content Developers (News) DIFFERENT SKILLS, GROWING	AI IMPACT	Foundational (They design and build the AI algorithms and systems that autonomously generate news content or enhance journalistic workflows.)
	WORK MOVES TO	Deep expertise in AI/ML algorithms, natural language processing, data science, and specialized knowledge of media ethics and content creation.
Field Reporters (On-the-ground, Human-Centric Reporting) / Investigative Editors (Nuanced oversight) COMPLEMENTARY, LESS EXPOSED	AI IMPACT	Low-Moderate Augmentation (AI assists in background checks, data analysis), but core human presence, empathy for sources, and high-level editorial judgment are irreplaceable.
	WORK MOVES TO	Building trust with sources, conducting sensitive interviews, providing on-the-ground human perspective, and applying nuanced editorial judgment.

§ 10 VERDICT

Closing judgement

> For News Analysts, Reporters, and Journalists, AI is not merely a tool but a radical force of transformation that will fundamentally redefine the news industry. It will autonomously handle the mundane and amplify investigative capabilities, compelling professionals to pivot to indispensable human insight, critical verification, and profound trust-building. The future of journalism is an intensified human-AI partnership, where ethical rigor and compelling human storytelling are paramount.

§ 11 BASIS REVISED 5 OCTOBER 2026

Evidence and revisions

What the exposure figure rests on, what changed when it was last revised, and the published work cited for this role.

SCORE

65 to 69

WINDOW

2-5 years (unchanged)

The 5 October 2026 review moved the score up by 4 points.

Exposure Index v2. Inputs: task applicability 77/100 (Microsoft AI applicability score 0.38 for News analysts, reporters, and journalists); observed usage 28/100 (Anthropic observed exposure 0.21); official exposure tier 100/100 (BLS: very high); labour-market trajectory 65/100 (BLS projects employment to fall 5.9% over 2025–35); published adoption rating 70/100 (high adoption). Weighted base 69.4. Final score 69. The previous figure of 65 was raised by 4 points, a small change that comes from moving off scores rounded to the nearest five. The change window is unchanged.

HOW THE FIGURE IS BUILT (EXPOSURE INDEX V2)

Task applicability — Microsoft Research, AI applicability score	77 × 35%	26.8
Observed usage — Anthropic Economic Index, observed exposure	28 × 20%	5.6
Official exposure tier — US BLS AI-exposure category	100 × 20%	20.0
Labour-market trajectory — US BLS projected employment change 2025–35	65 × 10%	6.5
Published adoption rating — This report's adoption level	70 × 15%	10.5
Weighted base		69.4
Exposure score		69

MEASURES BEHIND THE SCORE

US Bureau of Labor Statistics · *Employment Projections 2025–35 and AI Exposure Categories* (27 August 2026)

AI-exposure tier: Very high. Projected employment change 2025–35: -5.9%. Matched to News analysts, reporters, and journalists.

PUBLISHER PDF ARCHIVED COPY

Microsoft Research · *Working with AI: Measuring the Applicability of Generative AI to Occupations* (10 July 2025)

AI applicability score 0.38 (percentile 99 of 785 occupations) for SOC 27-3023.

PUBLISHER PDF ARCHIVED COPY

Anthropic · *Anthropic Economic Index report: Cadences* (26 June 2026)

Observed exposure 0.21 for SOC 27-3023 (percentile 85 of 756 occupations).

PUBLISHER PDF

World Economic Forum · *The Future of Jobs Report 2025* (7 January 2025)

Graphic designers appear on the WEF fastest-declining list for the first time in the 2025 edition, which the report attributes directly to generative AI.

PUBLISHER PDF

UK Department for Science, Innovation and Technology · *Assessment of AI capabilities and the impact on the UK labour market* (28 January 2026)

UK context: around 70% of UK workers are in occupations with tasks AI could perform or enhance, above the US average; a one-standard-deviation rise in exposure was associated with a 3.9% fall in UK job postings.

PUBLISHER ARCHIVED COPY

ALSO CITED FOR THIS ROLE

PwC · *2026 Global AI Jobs Barometer* (May 2026)

A two-track market is emerging: creative roles "professionalised" by AI (direction, strategy, brand) grow faster, while roles "democratised" by it see wage pressure.

PUBLISHER PDF

Archived copies are served only where the licence permits; otherwise the link goes to the publisher. Full research library: https://www.careerguard.ai/sources

§ 12 APPENDIX

Method and sources

Each report was written from a large body of published research. The exposure score itself is computed, not written: it is the CareerGuard Exposure Index, a weighted average of occupation-level measures from the US Bureau of Labor Statistics (AI-exposure classification and 2025–35 projections), Microsoft Research (AI applicability scores) and Anthropic (observed exposure), together with the adoption rating published on the report. The organisations and publications below are the standing literature behind the narrative sections. Every source, with dates, licences and archived copies where we are permitted to hold them, is catalogued in the research library.

Exposure Index v2 (October 2026). Each input is scaled to 0–100 and weighted: task applicability 35% (Microsoft AI applicability score ÷ 0.5), observed usage 20% (Anthropic observed exposure ÷ 0.75), official exposure tier 20% (BLS very high = 100, high = 70, moderate = 40, low = 10), labour-market trajectory 10% (50 2.5 × projected % employment change), published adoption rating 15% (very high = 85, high = 70, medium-high = 55, medium = 40, low-medium = 25, low = 10). Inputs not measured for an occupation are dropped and the remaining weights renormalised. An editorial adjustment of at most ±12 points is allowed only for automation channels the measures cannot see (robotics, self-service, machine vision, medical imaging, RPA/OCR, generative video) and is always

logged with its reason. Scores are whole numbers, not rounded to five. The change window shifts one notch (a year at each end) per ten points of movement.

I GLOBAL AND MACROECONOMIC IMPACT OF AI ON WORK

World Economic Forum

The Future of Jobs Report series — Employer survey of expected job growth and decline, skill shifts and technology adoption (2020, 2023 and 2025 editions); Artificial Intelligence and the Future of Entry-Level Work (2026).
AI governance and transformation reports — Frameworks on ethical AI, talent strategy and industry transformation.

McKinsey Global Institute

AI, Automation and the Future of Work series — Research quantifying automation potential by task, sector and demographic, from "Jobs Lost, Jobs Gained" to "Agents, robots, and us" (2025).
Industry-specific reports — Financial services, healthcare, manufacturing and others.

PwC

Global AI Jobs Barometer — Annual analysis of job postings and productivity by AI exposure (2024–2026 editions).
Upskilling Hopes and Fears survey — Employee perceptions and readiness.

Microsoft Research and Anthropic

Working with AI (2025); Anthropic Economic Index (2025–2026) — Occupation-level usage data from Copilot and Claude conversations, the two observed-usage measures behind the 2026 revision.

Stanford Digital Economy Lab and Stanford HAI

Canaries in the Coal Mine? (2025–2026); AI Index Report (annual) — Payroll evidence on early-career employment in exposed occupations; annual measurement of AI capability, investment and adoption.

Deloitte

Human Capital Trends series — Workforce, talent and HR technology trends.
Tech Trends series — Emerging technologies and their business implications.

Accenture

Technology Vision series — Forward-looking analysis of emerging technology, with emphasis on AI.
Fjord Trends — Design, innovation and human experience in a digital world.

Boston Consulting Group

AI/ML insights and industry solutions — "The AI Revolution in the Workplace" and related research.

EY

AI and workforce reports — Adoption, talent strategy and ethics.

IBM Institute for Business Value

AI and automation studies — Business models, workforce evolution and leadership.

OECD

AI Policy Observatory — International data and policy on AI, labour markets and skills.
Employment Outlook — Labour-market trends including technological impact (2023–2026 editions).

International Labour Organization

Generative AI and Jobs: A Refined Global Index of Occupational Exposure (2025) — Task-level exposure gradients for every ISCO occupation; successor to the 2023 global index.

International Monetary Fund

Staff Discussion Notes on AI and work (2024, 2026) — Complementarity framing: where AI augments and where it substitutes.

UK Department for Science, Innovation and Technology

Assessment of AI capabilities and the impact on the UK labour market (2026) — UK occupational exposure and job-posting evidence.

Brookings Institution

AI and automation research — Economic and social implications, displacement and skills.

Yale Budget Lab and Goldman Sachs Research
Tracking the Impact of AI on the Labor Market; AI and the US labour market (2026) — Aggregate labour-market monitoring; macro displacement estimates.

Oxford University (Oxford Martin School)
The Future of Employment — Frey & Osborne and subsequent research on susceptibility to automation.

MIT Technology Review
AI & Work — Reporting on AI research and its implications for industries and jobs.

Gartner
Hype Cycle for Artificial Intelligence — Maturity and adoption of AI technologies.
Future of Work reports — Workplace models and talent strategy.

U.S. Bureau of Labor Statistics
Employment Projections 2025–35; AI Exposure Categories; Occupational Outlook Handbook — Ten-year employment projections and, from the 2025 cycle, an AI-exposure tier for every detailed occupation.

Indeed Hiring Lab
AI at Work Report (2025) and posting-market updates — Skill-level transformation estimates and job-posting trends by occupation.

II CORE AI AND MACHINE-LEARNING RESEARCH

OpenAI
Research papers, blog and API documentation — Large language models, generative AI, safety and societal impact.

Google DeepMind
Research papers and blog — Reinforcement learning, AI for science, AGI and ethics.

Meta AI
Research papers and blog — Large language models, computer vision, AI for social good.

Hugging Face
Transformers library and model hub — Open-source state-of-the-art NLP models.

TensorFlow and PyTorch
Documentation and community forums — Core frameworks illustrating practical capability.

arXiv
cs.AI, cs.LG, cs.CV, cs.CL — Pre-print research.

NeurIPS and ICML
Conference proceedings — Top-tier academic research.

ACM and IEEE
Journals and proceedings — ACM Computing Surveys; IEEE Transactions on AI.

Kaggle
Datasets and competition solutions — Applied machine learning on real-world problems.

The Alan Turing Institute
Research and reports — Responsible and applied AI.

III ETHICAL AND RESPONSIBLE AI DEPLOYMENT

NIST
AI Risk Management Framework — Voluntary framework for managing AI risk.

European Commission
AI Act — Risk-tiered legal framework for AI.
Ethics Guidelines for Trustworthy AI — Principles for responsible development.

Partnership on AI
Research and best practice — Responsible AI development.

AI Now Institute
Annual reports — Social implications: power, inequality, rights.

ACM FAccT
Proceedings — Fairness, accountability and transparency.

Data & Society
Publications — Social implications of data-centric technology.

WIPO
Conversation on IP and AI — Intellectual-property implications of AI.

IEEE Global Initiative on Ethics of A/IS
Ethically Aligned Design — Recommendations for ethical AI design.

Center for AI and Digital Policy
Policy briefs — Accountable AI policy.
